

8 puzzle problem:

5	4	
6	1	8
7	3	2

Initial state

	1	2
3	4	5
6	7	8

Goal state

- ① misplaced tiles
- ② manhattan distance

Algorithm:

function a_star(start, goal):

 pq = Minheap()

 push(pq, (h(start, goal), start, [], 0))

 visited = set()

 while pq is not empty:

 f-n, current_state, path, g-n = pop(pq)

 if current_state == goal:

 return path + [current_state]

 add current_state to visited.

 for neighbor in generated_moves(current_state):

 if neighbor not in visited:

 g-neighbor = g-n + 1

 f-neighbor = g-neighbor + h(neighbor, goal)

 push(pq, (f-neighbor, neighbor, path + [current_state], g-neighbor))

 return None

function generate_moves(state):
 // Generate neighbors by moving blank tiles
 in 4 direction (up, down, left, right)
 // Swap the blank (0) with adjacent tile
 within bounds.

function h(state, goal)

$d \geq 0$

for each tile in state

if tile $\neq 0$.

distance $+= \text{abs}(\text{current_row} - \text{goal_row})$
 $+ \text{abs}(\text{current_col} - \text{goal_col})$

return distance.

Misplaced Tiles:-

function $h(\text{state}, \text{goal})$

$n \leftarrow 0$.

for i from $0 \rightarrow 8$:

if $\text{state}[i] \neq 0$ and $\text{state}[i] \neq \text{goal}[i]$:

$n \leftarrow n + 1$.

return n .
